# MULTILAYER 1

4 PLY + 3 CARBON

PHYSICAL DATA

- Thickness: 6.8mm±0.3mm
- Weight: 75gram±3gram
- Feature: Pressure release  
Even structure

Multilayer 1 is the very first Even Structure blade, it has the most simple combination but it was still a very tough balance to achieve, after countless optimization we finally have done it. And a new technology we put into this blade we call it "Pressure release". The carbon sheet in the middle is bent and stretched to lay between the wood sheets next to it and release all its pressure and tension, what we get is wood and carbon combine as a whole core.

PHYSICAL DATA

- Thickness: 6.0mm±0.3mm
- Weight: 85gram±3gram
- Feature: Techwood Surface  
Even Structure

# MULTILAYER W

11 PLY PURE WOOD

The Multilayer W blade is one of the SANWEI patterned EVEN structure blades. 11 play pure wood provides the more potential power to the players, and also, as one of the initiatives even structure blade, could be well controlled although when the player is tired; Soft touch feeling offers to you stored power for mid-far table pulling loop and could bring to you the comfortable playing strength.

As one of the most powerful blades among the even series of blades, this blade fulfilled with both hard and soft characteristics. Bring you more control over hand feeling, and also, the multilayer wood and carbon provide it with an increasing speed of the ball. The highly performs of even structure characteristic, make also this blade could produce high level topspin, make the ball getting bounce swiftly and violently.

PHYSICAL DATA

- Thickness: 6.0mm±0.3mm
- Weight: 95gram±3gram
- Feature: Even Structure

After a lot of research and learning of physics, we found that the Even Structure could have more possibilities than the traditional ones, so we tried to make a balance between attacking and defending with it. Multilayer C is our answer. Even Structure is good at absorbing power and vibration but not very offensive when attack, so we put a core in the middle to provide extra attacking ability.

# MULTILAYER Z

10 PLY + 9 CARBON

PHYSICAL DATA

- Thickness: 6.0mm±0.3mm
- Weight: 95gram±3gram
- Feature: Even Structure

PHYSICAL DATA

- Thickness: 6.0mm±0.3mm
- Weight: 95gram±3gram
- Feature: Techwood Surface  
Even Structure

# MULTILAYER C

9 PLY + 8 CARBON

# EXPERT CARBON FROSTER

5 PLY + 2 ARYLATE CARBON

## PHYSICAL DATA

- Thickness: 6.0mm±0.3mm
- Weight: 85gram±3gram
- Feature: KOTO Surface  
Arylate Carbon  
Outer Carbon

Froster is the newest flagship blade for the Expert-Carbon Series, also is the very first blade made by our new cold-pressing technology. We have studied the popular structures on the market and have tested many combinations of our own, different layers in different thickness will always create slightly different results, we only want the right one and finally, we present you this Ex-C Froster, made by KOTO surface, Arylate-Carbon Fibre and Kiri core.

We have specially re-designed the printing from the original Expert-Carbon Series printing, make it in silver colour to match its design inspiration. Also, its lens is made of new material with a new design. Besides, a new hard case which has the same design inspiration will be coming along.

# EXPERT CARBON PARAMID

5 PLY + 2 CARBON

### PHYSICAL DATA

- Thickness: 5.5mm±0.3mm
- Weight: 85gram±3gram
- Feature: Inner Carbon  
Para-aramid Fiber

As the major product of SANWEI Expert Carbon series blades, the fiber used in the Paramid is Para-aramid fiber carbon. It looks like the ALC, but the Para-aramid can providing a softer feeling. While you are hitting a ball, you can feel the blade is part of your body, you can feel the strength as well as everything is under control! Designed for mature professional players, the Paramid is more of a state of the art technology combined with a traditional mature classical structure.

### PHYSICAL DATA

- Thickness: 6.0mm±0.3mm
- Weight: 95gram±3gram
- Feature: Hinoki Surface  
Arylate Carbon  
Inner Carbon

Hynover is a premium blade which we have developed and tested for a longtime and finally made by our new craft technology. We optimized its 3 ply wood + 2 carbon structure by putting a paper-thin Birch layer each between the surface and the carbon, to achieve a better power transmission and vibration absorbing.

# EXPERT CARBON HYNOVER

5 PLY + 2 ARYLATE CARBON

# EXPERT CARBON SHRAFTON

5 PLY + 2 CARBON

## PHYSICAL DATA

- Thickness: 7.0mm±0.3mm
- Weight: 80gram±3gram
- Feature: Unique Beech surface

Shrafton is maybe the first carbon blade for you. The beech surface and soft carbon will give you good shot-feeling and help you play more aggressively. And in the meanwhile it will also increase fault tolerance. This will help you make a very powerful return of the ball.

## FEATHER CARBON

5 PLY + 2 CARBON

Fast speed & super light weight are the characteristics of the Feather Carbon blade. The LD carbon is only weaving vertically into the fiber area which influences principally the speed of balls attacking. This kind of structure could lose the weight of the blade while still keeping the same fast of playing.

### PHYSICAL DATA

- ▶ Thickness: 6.0mm±0.3mm
- ▶ Weight: 78gram±3gram
- ▶ Feature: Hinoki surface and grip Super light

**SANWEI**  
羽のような軽さ  
**Feather**  
Carbon  
🏸x

In order to adapt to the negative effect of weakening spin and speed, a new Hinoki Carbon now coming is the HC Speed Light. The Hinoki surface with carbon inside will definitely increase the speed and make the attack more powerful. With a very reasonable price, could help players enjoying the fresh touch feeling of Hinoki carbon blade.

### PHYSICAL DATA

- ▶ Thickness: 7.0mm±0.3mm
- ▶ Weight: 85gram±3gram
- ▶ Feature: Hinoki Surface Light weight

**SANWEI**  
**HC Speed**  
🏸x

LD Light is a light carbon blade. SANWEI has been producing carbon blade for years and realized that less weight could mean more, so we made this LD Light. It's a good choice for the players who want to play aggressively with a more handy blade. All of its material is for this specific character: Balsa core for the light weight, LD carbon provides the power, KOTO surface gives the clear impact feeling.

## LD LIGHT

## FEXTRA ONE

7 PLY PURE WOOD

Fextra One is the upgrade version of the original Fextra, and it's the very first blade as a starter of the whole new Fextra Series which is for the pure wood blades. It has three layers of Ayous in even thickness as a core. Its 7 layers of pure wood structure was designed in Japan has been tested by the market for years and optimized for times, as a result, it provides a good ability of control while not losing the steady feeling when hitting the ball.

### PHYSICAL DATA

- Thickness: 6.0mm±0.3mm
- Weight: 90gram±3gram
- Feature: 3 even wood layers in the middle as core

## FEXTRA ALLROUND

5 PLY PURE WOOD

**SANWEI**  
**FEXTRA**  
Allround  
Design in Japan

The Fextra Allround is a Lite version of Fextra. Since the Fextra was launched it has gained a good reputation so we decided to make a "cheaper Fextra" which is this Fextra Allround. We made this blade has an as much similar character as the Fextra does, with a more simple structure and lower price, but also good quality. It's gentle character suits the players who want to make progress in their skill but haven't figure out what to master.

### PHYSICAL DATA

## SYNERGY

The Cannon Carbon blade is one of the flagship products of SANWEI New Generation. It's the very first blade powered with our new "Heavy Carbon". This new carbon has more density and provides a massive elasticity, so at the beginning of developing this blade was too powerful to play properly. After adjusted the combination and the thickness of wood sheets, we finally present this brand new Cannon Carbon.

## ACCUMULATOR J

### 5 PLY PURE WOOD

#### PHYSICAL DATA

- Thickness: 7.0mm±0.3mm
- Weight: 80gram±3gram
- Feature: Adapted to all playing style

Accumulator

Accumulator J is a pure wood training level blade. SANWEI knows what is the real demand of starters, so we designed for the starters who want to practise their skills seriously. It has no clear character to be suitable for training any playing styles.

## ACCUMULATOR S

### 5 PLY PURE WOOD

#### PHYSICAL DATA

- Thickness: 6.0mm±0.3mm
- Weight: 75gram±3gram
- Feature: FL Thin Grip

Accumulator

Accumulator S is a classic training blade of SANWEI, its FL Thin grip is designed for children. It's a great allround pure wood blade for training.

## ACCUMULATOR C

### 5 PLY + 2 CARBON

#### PHYSICAL DATA

- Thickness: 6.5mm±0.3mm
- Weight: 80gram±3gram
- Feature: The cheapest carbon blade of SANWEI

Accumulator

Accumulator C is a blade for all purpose. The classic structure gives it a balance character.  
Upgraded from the classical SANWEI 502E blade. Elementary level carbon blade. Accumulator C is an excellent choice for beginners who want to try out a carbon blade. Affordable price with good performance!

## C&C

### 5 PLY + 2 CARBON

#### PHYSICAL DATA

- Thickness: 6.5mm±0.3mm
- Weight: 80gram±3gram
- Feature: Limba Surface

C&C is a training level carbon blade, the Limba surface and carbon gives it a basic ability to play offensively, it suits the players who want to train their attacking skills.

## VS 7

### 5 PLY + 2 CARBON

#### PHYSICAL DATA

- Thickness: 6.5mm±0.3mm
- Weight: 90gram±3gram
- Feature: Ebony Surface

Vs7 blade is one of the top of training level blade of SANWEI. The Ebony surface provides a hard feeling while its carbon inside also offers a good speed. It's a good choice for who wants to player more aggressively.

## TS 7

### 5 PLY PURE WOOD

#### PHYSICAL DATA

- Thickness: 6.0mm±0.3mm
- Weight: 90gram±3gram
- Feature: Dark Black Surface

Ts7 is one of the top of training level of SANWEI. The dark black surface gives it a nice looking after mounted rubber on it. Its pure wood structure offers a good control and acceptable speed, it's a good choice for who wants to play with more loop and spin.

TARGET

NATIONAL

HIGHLY STICKY

SANWEI NANO surface optimized technology:

Which makes the surface of traditional sticky rubbers to be more active, elastic and delicate, improving the control and spin effect when hitting the new material 40+ ball, creating looping more easily and offering more error-tolerant rate. Combined with the internal energy cake sponge, it shows a new option that could substitute the energy boosting rubbers, while at the same time enhancing the elasticity and the shot speed, allowing the player to handle the rubber with ease.

The SANWEI NANO rubber bonding process:

As traditional rubber-adhesive usually becomes a hard layer after solidification, SANWEI trying to solve this defect by applying exclusive soft-adhesive into the rubber bonding process, so that the adhesive layer between the rubber and the sponge is no longer hard, then creating more efficient power transfer between the rubber surface and the sponge, which greatly reduces energy loss, bringing out higher quality hits and more penetrating feel.

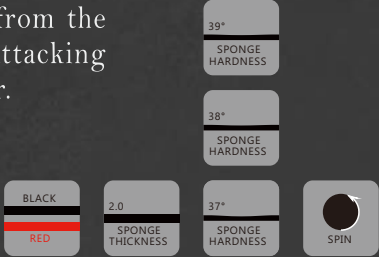

GEAR

HYPER

UNSTICKY

The new GEAR Hyper is a combination of European type top-sheet and mousse texture cake sponge in different hardness. The top-sheep could assure outstanding surface tension and grasp ability, and the sponge creates firm and direct feedback. A new attaching technique is also used in the rubber which makes little loss of energy when transferring from the sponge to top-sheet. This rubber offers enough energy when doing active/passive attacking and looping, and provides a good tolerance of fault and help to reduce unforced error.

# TARGET EUROPE FX

UNSTICKY

The surface of Target Europe is specially treated to be as thin as possible, and due to the thin surface and the cake sponge, it can transfer the power more directly. So, it can help you to make a strong spin without losing speed, and it's more controllable in passive playing. This rubber is a perfect combination of high-speed lasticity and great compression.

BLACK RED	2.1 SPONGE THICKNESS	38° SPONGE HARDNESS	SPIN
--------------	----------------------------	---------------------------	------

# TARGET EUROPE FX

UNSTICKY

This rubber is design for the players who ask for more rotation and control of the ball. It gives more bounce and longer arc trajectory compared to Target 40+. More importantly, the rubber is not only for professional players, advanced players will also get used to this rubber.

BLACK RED	2.1 SPONGE THICKNESS	36° SPONGE HARDNESS	SPIN
--------------	----------------------------	---------------------------	------

# TARGET PRO BLUE

STICKY

This rubber is with special made high-density sponge, the expansion process avoids the shrinkage and tearing of the sponge, the accurate control of vulcanization gives the strong spin and makes the power output more stable. The rubber will also bring continuous counter-attack and easy control of close table stroke.

BLACK RED	2.05 SPONGE THICKNESS	MAX SPONGE HARDNESS	SPIN
--------------	-----------------------------	---------------------------	------

# TARGET 90

HALF STICKY

This is a classic combination of the sticky top sheet and light tension rubber, it could provide perfect beating feedback, reasonable speed and stable spin. It can be a great choice for players who want to enhance their skills.

BLACK RED	2.1 SPONGE THICKNESS	39° SPONGE HARDNESS	SPIN
--------------	----------------------------	---------------------------	------

## TAIJI LIGHT

HALF STICKY

Taiji Light is an entrance level rubber, but its light weight makes it apart from other normal training rubber. We optimized the origin Taiji by replacing its sponge to a light white one, to adjust the requirement for light weight of the players who seek quick movement.

## TAIJI PLUS

HALF STICKY

Taiji Plus can offer you clear feedback and smooth transfer of power, this will give the balls a perfect first speed. Compering with Taiji, Taiji Plus can produce more power and speed, it suits the players who have decent skill and want to play aggressively.

## ULTRA SPIN

HALF STICKY

The new version of Ultra Spin is a good choice for training which integrates speed, rotation, elasticity, control and weight, these five aspects as a whole, in order to improve the learning performance of children and beginners. This upgraded rubber is especially adjusted for 40+ new plastic ball, which is highly recommended by table tennis coaches because of its good value for money.

## CODE CODE OX

LONG PIMPLES

Code is a long pimple rubber keeps the flexible characteristic. We optimized this rubber by complicating the top texture of pimples and thinning the bottom, which provides a better performance. Following by unpredictable returning trajectory when you strike.

## DIZZY OX

LONG PIMPLES

Dizzy is a long pimple rubber which is easy to control with its tenacious pimples. Specially made surface texture could offer lower arc, erratic trajectory and anti-spin effect.

## GHOST GHOST PRO

SHORT PIMPLES

Thanks to the “Energy Releasing” technique, Ghost could enhance your forcewhile keeping accurate control.

The Pro version provides the blue cake sponge which would be surprisingly powerful when you play powerful smash.

## TAIJI 210

PREMADE BAT

Taiji210 is a 5 ply wood premade bat with double ITTF approved rubbers, good quality/price ratio.

## TAIJI 610

PREMADE BAT

Taiji610 is a 5 ply wood premade bat with double ITTF approved rubbers, built by black and red wood plies which makes it has a unique looking. By learning from the most popular composition, three even thickness layers in the middle give it a good performance.

## TAIJI 310

PREMADE BAT

Taiji 310 is a pure wood premade bat which could be the perfect choice for starters. It equips ITTF approved rubbers on both sides. It's an allround premade bat for a great quality/price ratio.

## TAIJI 810

PREMADE BAT

Taiji810 is a 5 ply wood premade bat with double ITTF approved rubbers, and it has a thick core ply to provide good power.

## TAIJI 510

PREMADE BAT

Taiji510 is a 5 ply wood premade bat with double ITTF approved rubbers, its whole black plies give it a premier look.

## TAIJI 910

PREMADE BAT

Taiji910 is a 7 ply wood premade bat with double ITTF approved rubbers, it's Ebony surface ply gives it a harder compact feeling when you hit the ball.

# TAIJI 710

PREMADE BAT

PHYSICAL DATA

► Feature: Carbon blade

Taiji 710 is a premade bat with carbon inside, suits the players with basic skills. It equips ITTF approved rubbers on both sides. It's an offensive premade bat suits attack/loop playing style.

# PHOENIX

PREMADE BAT

PHYSICAL DATA

► Feature: Black&red wood ply

Phoenix and Owl are 5 ply pure wood high quality premade bats, both equip ITTF approved rubbers on both sides. Phoenix has black and red wood plies and Owl is built by all black wood plies, with colour matching grips they could have a very premium look.

They also have a very good performance, both of them are built with good quality blades and rubbers, if you are intending to purchase decent equipment but don't want to waste too much time on choosing blades and rubbers, these two are perfect for you.

PHYSICAL DATA

► Feature: All black wood ply
